

Connect the power of HALO

Halo Home Makes Your Lighting Smarter

- Only a few components are needed for a complete installation— Bluetooth enabled Halo LED fixtures or Halo Home Bluetooth dimmer switches, and the Halo Home app. In-wall accessory dimmers work with any LED fixtures.
- The Halo Home app allows real-time control, color temperature tuning, scheduling, and reconfiguration from your smart device.
- Bluetooth enabled Halo fixtures include 4—6" LED Recessed fixtures and LED floodlights. Retrofit existing fixtures with a wireless adapter or control them with a Halo Home dimmer switch. If desired, add an internet access bridge for use with Amazon Alexa and control from anywhere!

All you need is one HALO Home device!

Lights and controls combined!

Total home solution!
